

GADS7331 - Part Three
Patrick Bannerman - ST10356192

Evidence of Attendance and Engagement:

I attended the 24-bit Games Games Conference at Open Window Centurion held on the 28th May 2026.

Photographic proof of attendance -

Notes and Quotes from Attendees -

Feedback 1 -

BARK System (take inspiration from Metal Gear Solid 1's AI)
Lower the amount of dialogue given
Improvements visually (From greybox / proof of concept to alpha)

Feedback 2 -

Implementation of text-to-speech
Trancy
Procjam

Feedback 3 -

Potentially additional prompt context to assist in the expansion of dialogue and quests

Feedback 4 -

The dialogue ceiling can limit the LLM with the quest dialogue

The event attended -

I chose to attend the 24-bit Games Game Developer Conference held at the Centurion branch of the Open Window tertiary education company. It was an event that saw game

developers new and old attend to showcase what they are developing, give guest speeches, and provide a means by which people within our industry can socialise and connect themselves with other like-minded individuals. I chose to go to this event due to a mixture of convenience, support of peers, and location. A fellow game development student offered to assist in my transportation to the event. Due to the timing, their kindness, and it being one of the few chances given for an event like this I decided to go to this conference. The alternative given by my lecturer for an event similar to this would have been at the Goethe Institut. While the event was just as possible of giving me the resources needed to complete this project it would have a longer trek that would have taken more resources in order to do.

Identification of Interviewees -

Due to the theme and primary intent of the event the conference consisted of different people within the South African video game industry. The people ranged from students like my Emeris peers and I, to lecturers, to working individuals within the field. Some were there looking for game developers to potentially hire for their business while others were there to give guest speeches. The attendees themselves who gave feedback were guest speakers, game developers, and students.
